                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1915
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens EWSR1 full length open reading (cDNA clone C22ORF:pGEM.EWSR1). CR455490 CR456490.1 GI:47678510 CDNA; Chromosome 22; ORF.
                                                                                                                                                                                                 Submitted (24-MAY-2004) Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: c22g@sanger.ac.uk Manuscript Sanger Institute name: pGEM.EWSR1 Homo sapiens cDNA sequence. This sequence was generated as part of The Wellcome Trust Sanger Institute program to isolate cDNA clones representing the full length open reading frame of well annotated protein coding genes on human chromosome 22. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (19-DEC-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Feb 28, 2000 this sequence version replaced gi:6692312. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Macdonald, P., Marquis, N., McEwan, P., McGurk, A., McKernan, K., Meldrim, J., Meneus, L., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Olivar, T.M., Peterson, K., Pierre, N., Pisani, C., Pollara, V., Raymond, C., Riley, R., Rothman, D., Roy, A., Santos, R., Severy, P., Spencer, B., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Tesfaye, S., Theodore, J., Tirrell, A., Vassillev, H., Viel, R., Vo, A., Wu, X., Wyman, D., Ye, W.J., Zimmer, A.

E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk On Mar 11, 2002 this sequence version replaced gi:16944185. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.Banger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.Banger.ac.uk/HGP/Chr1
RP11-9118 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is the entire insert of clone RP11-918 The true left end of clone RP11-47977 is at 136234 in this sequence. The true right end of clone RP11-375H19 is at 73742 in this sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel modulators that alter the interaction between the Ewing sarcoma protein (EWS) and its nuclear receptor, as well as the screening method thereof. Specifically, it refers to determining and dentifying a hormonal effect brought about by test compounds that condulate either the binding of EWS to the nuclear receptor or the ligand-induced activity of this receptor. The present invention describes the nuclear receptors as including osstrogen, progesterone, thyroid hormone, conclear receptors as including osstrogen, progesterone, thyroid hormone, creceptors. Accordingly, these modulators may be used in the development of pharmaceutical compositions that can diagnose and be used to treat diseases associated with receptor dysfunction such as prostatic cancer, acue, hypogonadism and androgen-resistance syndrome e.g. cresticular feminisation. This method provides reliable, sensitive, construction syndrome ending the compounds. This polynucleotide sequence is the cDNA encoding the human Ewing sarcoma protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 100.0%;

```

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

Claim 1; SEQ ID NO 1199; 114pp; English.

CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC DNA chip analysis as given in the specification, and comparing the CC expression level to an expression level in an unactivated GC, where CC differential expression of Gs is indicative of GCA. Also included are CC modulating (M2) GA by contacting GC with an agent that alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent Ctissue, an allergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression of the gene in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease, by detecting the level of CC expression in a sample of the tissue of gene(s) from Gs, where the level of CC expression in a subject of the tissue of inflammation; (4) treating CC (M5) an inflammation (especially chronic) in a CC inflammatory disease, by contacting a tissue having inflammation with an CC inflammatory disease, by contacting a tissue having inflammation with an CC inflammatory disease, by contacting a tissue having inflammation with an CC inflammatory in a tissue, an allergic response in a subject to a pathogen or sterile for screening an agent capable of modulating GCA preferably in an CC inflammation in a tissue; M1 is useful for modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an CC exposure of a subject to a pathogen or sterile inflammation in a tissue, an allergic response in a subject, capable of modulating GCA preferably in an CC exposure of a subject to a pathogen or sterile inflammation of gene(s) from Gs in the tissue. M1 is useful for detecting an inflammation of gene(s) from Gs in the tissue. M2 is useful for terminating GCA preferably in an inflammation of gene (s) from Gs in the tissue. M2 is useful for terminating GCA preferably in an inflammation of gene (s) from Gs in the tissue (s.g. genetatory distaces syndrome, inflammatory bowel disease, country of genetal genetal genetal gen electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences The invention relates to detecting (M1) granulocyte (GC) activation thrombosis, M3 is useful level M an ġ à

                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of diagnosing (I) the onset or CC progression of benign prostatic hyperplasia (BPH), or screening (II) for CC or identifying an agent that modulates the onset or progression of BPH. CC The method is based on changes in gene expression in BPH tissue isolated (CC from patients exhibiting different clinical states of prostate (CC from patients exhibiting different agency in the subject that are differentially regulated compared to normal prostate certing the expression levels of one or more genes in prostate cells (II) comprises (CC from the subject that are differentially regulated compared to normal (CC prostate cells. (II) comprises preparing a first gene expression profile of BPH cells or BPH-like cell population, exposing the cells to the cells, preparing a second gene expression profile of the agent exposed (CC agent, preparing a second gene expression profiles. (I) is useful for diagnosing the first and second gene expression profiles. (I) is useful for identifying an agent that modulates the onset or progression of BPH. (CC in methods are useful to present information identifying the expression (CC expression of gene in the database, and displaying the expression levels of at least one gene in the database, and displaying the expression levels (CC expression of gene in the database, and displaying the expression levels (CC prostate cancer. ABK64106-ABK64860 represent human benign prostatic very constatic concerts of the invention (CC prostate cancer. ABK64106-ABK64860 represent human benign prostatic very constatic constant in the invention (CC prostate cancer. ABK64106-ABK64860 represent human benign prostatic very constant cancer.

state;

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                             polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; fusion proteins comprising a TAT polypeptide; fusion proteins comprising a TAT polypeptide; fusion proteins comprising a TAT polypeptide; fusion for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in cromosome identification and in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                       The probes 22RR3 and 22RR12 were used to screen a human foetal brain library (Stratagene cat.# 936206). The clone BFLAC5 was identified an sequenced. It represents the entire coding region and 3'-UTR of the gene. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                              New nucleic acid of EWS gene and its hybrid(s) - contg. gene sequence involved in chromosomal trans-location, also derived mRNA, probes, fusion proteins etc., for diagnosis and treatment of Ewing sarcoma and melanoma.
                                                                                                                                                                                                                                                                                                                           Aurias

potentiating effect of the above protein; (13) a method of therapeutically treating a mammal having a cancerous tumour comprising	the growth of the cell is at least in part dependent upon a growth	the composition of matter contained within the container; (12) methods of	with a carrier; (11) an article of manufacture comprising a container and	composition of matter comprising the above (chimeric) polypeptide,	binding organic molecule that binds to the above polypeptide; (10) a	for producing the antibody; (8) an isolated oligopeptide that binds to	an isolated antibody that binds to the above polypeptide; (7) a process	comprising the above polypeptide fused to a heterologous polypeptide:	length coding region of the above nucleotide sequences; or (c) a sequence	nucleotide sequences; (b) an amino acid sequence encoded by any of the above	a process for producing a polypeptide; (4) an isolated polypeptide	(C). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector: (3)	sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-	<pre>sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80*</pre>	C The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide	Claim 1; SEQ ID NO 2904; 5504pp; English.	New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer.	WPI; 2004-534300/51.	Wu TD, Zhou Y;	(ZHOU/) ZHOU Y. Homo sapiens.	human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.	Human tumour-associated antigenic target (TAT) cDNA sequence #2904.	07-OCT-2004 (first entry)	ADQ86032;	RESULT 7 ADQ86032 ID ADQ86032 standard, cDNA, 2372 BP.	2341 CAAATGTTTAATAAAAAAAAAAAAAAAAAAAAAAAAAAA	2360 CAAATGTTTAATAAAAAAAAAAAAAAA 2390	2281 TCTTAACTGTAACAATGTTCATGGTTGTGATGTTTTTTTT	2221 TTTAACAATGGGAACCCCTTGTGAGCATGCTCAGTATCATTGTGGAGAACCAAGAGGGCC 2280

cells that express the above protein; (14) a method of determining the presence of a protein in a sample suspected of containing the protein described above; (15) methods of diagnosing the presence of a tumour in a mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene. therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a human TAT CDNA sequence from the present invention.

Sequence 2372 BP; 628 A; 589 C; 668 G; 487 T; 0 U; 0 Other;

CR sequences. (I) is useful as hybridisation probes, polymerase chain
CR reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CR and in recombinant production of (II). The polynucleotides are also used
CR in diagnostics as expressed sequence tags for identifying expressed
CR in diagnostics as expressed sequence tags for identifying expressed
CR cactivity of (II) or to treat disease states involving (II). (II) is
CR useful for generating antibodies against it, detecting or quantitating a
CR polypeptide in tissue, as molecular weight markers and as a food
CR supplement. (II) and its binding partners are useful in medical imaging
CR involving aberrant protein expression or biological activity. The
CR diagnostics, forensics, gene mapping, identification of mutations
CR diagnostics, forensics, gene mapping, identification of mutations
CR diagnostics, forensics, gene mapping, identification on DNA and
CR and to produce other types of data and products dependent on DNA and
CR and to produce other types of data and products dependent on DNA and
CR and to produce other types of data and products dependent on DNA and
CR amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CR patent did not appear in the printed specification, but was obtained in
CR electronic format directly from WIPO at
